

Lexical Structure

```
print "Table of multiples of 2 and 3:"  
for x in range(10):  
    print x, x*2, x*3  
print "That's it."
```

Blocks begin with a line introducing what kind of block it is, followed by a colon.

Loop body is indented from code outside the block

Back to original indentation level; back to original code context
